\$30 million facilities upgrade at Norwood Morialta High School

Artistic impression of the proposed middle school. This concept illustration is not an exact representation of the upgrade.

Planning is underway at Norwood Morialta High School as the first stage of their Building Better Schools upgrade.

The plan proposes to consolidate the two school campuses onto the Parade site at Magill with a new purpose built middle school and an enhanced school frontage.

These plans will include building additional specialist facilities for science, technology, engineering, maths (STEM), visual arts,

technology studies, music, home economics, physical education and a new library hub.

Planning includes the redevelopment of outdoor spaces to provide better outdoor learning experiences.

These initial plans are subject to further planning and may change.

Building Better Schools for South Australian students

South Australian students deserve a world-class education in exceptional facilities to help prepare them for the jobs of tomorrow.

To assist with this, we are investing \$692 million to improve, refurbish or expand capacity at 91 public schools through the Building Better Schools Program, bringing the total investment over the past 4 years to more than \$1 billion.

The upgrades will look different in every school and may include:

- the removal of old relocatable or modular classrooms
- creation of new buildings for schools with growing student numbers
- the refurbishment of classrooms and buildings, transforming them into modern learning areas
- landscaping and upgrades of the street frontage.

Around 67,000 students across the state will benefit with around 1 in 5 schools having their facilities upgraded.

To keep up to date with the project visit www.decd.sa.gov.au/buildingbetterschools.

The Building Better Schools program is part of South Australia's Public Education Action Plan to support children and their public school to benefit South Australia's future.
